

CALL FOR PROJECT:

New GEOTHERMICA Call has been published. Deadline for pre-proposals: Friday 13 September 2019.

Innovation in the industry is the main target area of this Call.

GEOTHERMICA aims at direct use and power generation from geothermal resources in an optimized way, which includes integrated and combined systems (e.g. heat pumps, other forms of renewable energy, and using the underground as a heating and cooling energy storage site).

Projects designed to reduce the time to market for novel geothermal energy concepts, involving industry in research, innovation and demonstration activities, should be submitted in a pre-proposal format by September 13th 2019. Project proposals have to be issued from consortia with several partners, with a wide geographic spectrum from several of the participating countries (at least three eligible applicants from at least three participating countries) and may be funded for a maximum of 3 years, with a project start in September 2020.

All information can be found on <http://www.geothermica.eu>.

To be listed as a potential candidate in a consortium, companies, research organisations, universities and higher education institutions, industry organisations, local/regional governments and NGOs can also register on <http://www.geothermica.eu/matchmaking/>
